

Access Floors

were once used only in equipment room area where it provides wire management solution. Today, the proliferation of technologies and IT has brought about massive telecommunication cables and data cables that otherwise cannot be managed without the provision of an intelligent access floor system. Massive access floors are being installed in speculative and tenant occupied buildings, especially in banking offices and IT companies. It can now also be used to control airflow and to provide service accessibility in today's super cleanrooms and test & assembly area.

M3 Access Floors provides an excellent investment as it guarantees the functional life of the building, thus eliminating the fear of building obsolescence. Our cement core steel panels is made from two layers of steel plate welded together and filled with lightweight concrete. The result is a top performance access floor system at a reasonable price. Various types of standard duty & heavy duty understructures are also available to suit different applications and demand. Other options include epoxy coatings of pedestals, choice of static-control vinyl / high pressure laminate coverings, special 1200 x 1200mm grid understructure system, etc. It is one of the very few truly value for money access floors in the modern industry.
